

TALENT TURNAROUND

A Montgomery County Workforce Initiative

Talent Turnaround is a workforce initiative that focuses on exposing our Montgomery County youth to a wide variety of industry careers that are in high demand for local businesses. Extra focus and attention will be given to STEM careers and encouraging students to explore science, technology, engineering and math careers. Students have heard from CVR Energy, John Deere Coffeyville Works and Acme Foundry. Students learned about the everyday responsibilities and challenges that these careers face and explored what it means to make a casting with the Foundry in a Box experiment.

What does this look like in the future? How do we expand this program to reach all school districts and all students? How can we best serve industry with this program?

Join our Steering Committee, and help us set the course. We need Business & Industry Partners to help us shape the future of this program.
